## Self Check Kit Features & Benefits

Whether you're RFID or Barcode, the SC Kit is a great option for libraries looking for a budget friendly alternative. With the same benefits of mk's other SelfCheck options, the SC Kit allows libraries to use their current hardware, so it is the most economical solution. The library simply furnishes its own hardware and uses mk's LibSoft, SelfCheck software. RFID libraries will be supplied with a shielded RFID pad kit including USB cable and power supply.

Patrons can check out or access their account by scanning their library card, smartphone, or entering their patron number with PIN number (if applicable). Items to be checked out, renewed, or returned are placed on the RFID antenna in a stack or read by the barcode scanner. If the library enables the Account View, patrons are able to view item due dates, renew items, and pay fines and fees via mk's LibSoft software.

The library has options to enable or disable SelfCheck features including, but not limited to printing a receipt, receiving an emailed receipt, or declining a receipt during the checkout, check-in, and renewal process. Optional items include card/cash payment, braille, audio, library calendar, OverDrive, and Novelist integration.
